

# All Hazards Guide for Businesses: Planning for Risks

*This Resource Manual is designed to assist businesses with the development of more thorough Disaster Plans by identifying data and resources associated with a variety of man-made and natural hazards.*

**Tampa Bay Local Emergency Planning Committee  
Facility Disaster Planning Subcommittee  
4000 Gateway Centre Blvd., Suite 100  
Pinellas Park, FL 33782  
727/570-5151 ext. 29 / Staff Contact: John Meyer**

## Business Continuity Planning

**Business Continuity Plans (BCP) cover a range of situations, including the death of a key executive or manager, crisis events that threaten to shut down business operations for an extended period of time, and other financial situation or unexpected event that threatens to destroy or injure the company. BCP is the act of anticipating incidents which will affect critical functions of the company and ensuring that the business and its employees respond to any emergency in a safe, planned and rehearsed manner.**

# Components of your BCP

1. **Strategic Plans** - defines the vision, mission, goals and objectives of the program.
2. **Contingency Planning – Emergency Operations/Response** identifies the procedures which spell out how you will respond to emergencies, such as hazardous materials release, fire or hurricane. The contingency plan should include checklists that also list roles and responsibilities of internal and external agencies.
3. **Mitigation Strategy** – spell out the interim and long-term actions to eliminate hazards or to reduce the impact of those hazards. It's about protection of your assets (including data), facilities and, most importantly, your employees.
4. **Recovery Strategy** – identifies the short-term and long-term priorities, processes, vital records, resources and procedures for the restoration of services, facilities, etc. The Recovery Strategy should address the possibility of losing access to one or more workplaces/facilities (i.e. Alternate Facility). This Continuity of Operations Plan identifies critical procedures and function to be recovered and what is necessary to do so.

# Hazardous Materials

Public awareness of the potential danger from accidental releases of hazardous substances heightened over the years as serious chemical accidents and releases have occurred around the world. The *Superfund Amendments and Reauthorization Act* (“SARA Title III”) in 1986 and the *Emergency Planning and Community Right-to-Know Act* (EPCRA”) in 1988 were enacted to: improve chemical safety, protect public health, protect the environment and increase public awareness.

If your business stores hazardous materials, it is important that you reach out to your local emergency responders to ensure that your facility:

- Complies with all requirements and safety protocols;
- Develop and share contingency plans including emergency contacts; and
- Train/exercise your employees on safety procedures.

# SEVERE WEATHER

## Hurricanes

A hurricane is a type of tropical cyclone or severe tropical storm that forms in the southern Atlantic Ocean, Caribbean Sea, Gulf of Mexico, and in the eastern Pacific Ocean.

All Atlantic and Gulf of Mexico coastal areas are subject to hurricanes. The Atlantic hurricane season lasts from June to November, with the peak season from mid-August to late October.

Hurricanes can cause catastrophic damage to coastlines and several hundred miles inland. Hurricane can produce winds exceeding 155 miles per hour as well as tornadoes and microbursts. Additionally, hurricanes can create storm surges along the coast and cause extensive damage from heavy rainfall. Floods and flying debris from the excessive winds are often the deadly and destructive results of these weather events.

# SEVERE WEATHER

## Tornadoes

Tornadoes are nature's most violent storms. Spawned from powerful thunderstorms, tornadoes can cause fatalities and devastate a neighborhood in seconds. A tornado appears as a rotating, funnel-shaped cloud that extends from a thunderstorm to the ground with whirling winds that can reach 300 miles per hour. Damage paths can be in excess of one mile wide and 50 miles long. Every state is at some risk from this hazard. Some tornadoes are clearly visible, while rain or nearby low-hanging clouds obscure others. Occasionally, tornadoes develop so rapidly that little, if any, advance warning is possible. Before a tornado hits, the wind may die down and the air may become very still. A cloud of debris can mark the location of a tornado even if a funnel is not visible. Tornadoes generally occur near the trailing edge of a thunderstorm. It is not uncommon to see clear, sunlit skies behind a tornado.

# SEVERE WEATHER

## Thunderstorms/Lightning

The Tampa Bay Region is #1 in lightning strikes in the U.S. Your business should be able to handle the occasional power outages and protect your facility from potential fires and strikes.

All thunderstorms are dangerous. Every thunderstorm produces lightning. While lightning fatalities have decreased over the past 30 years, lightning continues to be one of the top three storm-related killers in the United States. In 2010 there were 29 fatalities and 182 injuries from lightning. Although most lightning victims survive, people struck by lightning often report a variety of long-term, debilitating symptoms.

# SEVERE WEATHER

## Freshwater Flooding

Floods are one of the most common hazards in the United States, however not all floods are alike. Some floods develop slowly, while others such as flash floods, can develop in just a few minutes and without visible signs of rain. Additionally, floods can be local, impacting a neighborhood or community, or very large, affecting entire river basins and multiple states.

Overland flooding, the most common type of flooding event typically occurs when waterways such as rivers or streams overflow their banks as a result of rainwater and cause flooding in surrounding areas. It can also occur when rainfall exceeds the capacity of underground pipes, or the capacity of streets and drains designed to carry flood water away from urban areas.

Typical business insurance does not cover flood damage. You should review your insurance policies annually to determine if you have sufficient coverage for all types of disasters, including flooding.

# Fires

Fire is the most frequent hazard affecting businesses. Take steps to protect your facility and your employees. OSHA standards require employers to provide proper exits, fire fighting equipment, emergency plans, and employee training to prevent fire deaths and injuries in the workplace. You can take a few simple precautions which will protect your business and may well preserve the environment you enjoy.

## Terrorism/Violence in Workplace

Throughout human history, there have been many threats to the security of nations. These threats have brought about large-scale losses of life, the destruction of property, widespread illness and injury, the displacement of large numbers of people and devastating economic loss. Responding to the psychological impact to employees should be addressed. Recent technological advances and ongoing political unrest are components of the increased risk to national security.

Additionally, businesses can minimize their risk to violence in the workplace by establishing and maintaining strict hiring practices, anti-violence policies and security procedures as well as a host of other measures.

# Cyber Attacks

According to Wikipedia, Cyberterrorism is defined as *the use of Internet based attacks in terrorist activities, including acts of deliberate, large-scale disruption of computer networks, especially of personal computers attached to the Internet, by the means of tools such as computer viruses.*

For facilities that produce or inventory hazardous materials, the following resources can be used to plan for a cyber attack results in a loss of control of the chemical inventories and/or processes.

## Civil Disorder/Unrest

According to Wikipedia, *civil disorder or civil unrest is a broad term that is typically used by law enforcement to describe one or more forms of unrest caused by a group of people. Civil disturbance is typically a symptom of, and a form of protest against, major socio-political problems; the severity of the action coincides with public expression(s) of displeasure. Examples of civil disorder include, but are not necessarily limited to: illegal parades; sit-ins and other forms of obstructions; riots; sabotage; and other forms of crime. It is intended to be a demonstration to the public and the government, but can escalate into general chaos.*
